- Ensured accurate and real-time data transmission from downhole tools to surface systems, facilitating informed decision-making during drilling operations.
- Worked closely with the drilling team to optimize drilling parameters and improve overall wellbore quality based on real-time measurements.

EDUCATION

Federal University of Technology Owerri

Degree | Beng

I am a dedicated Chemical Engineering graduate from the Federal University of Technology, Owerri, where I earned a second-class honors degree due to my strong attention to detail. In my final year, I led my project group to achieve the highest defense score, demonstrating my managerial skills in coordinating efforts, managing resources, and meeting deadlines. My ability to understand and apply complex concepts, along with my leadership experience, positions me as a promising professional in any leadership role, eager to make meaningful contributions to the field.

Federal University of Technology Owerri

Others | Certificate

Advanced certificate in environmental standard.

LA PLAGE META VERSE

Others | Certificate

Disaster management

IBM

Others | Certificate

Data science methodology is a systematic approach to solving data-driven problems. It begins with (problem definition) to clarify the question or issue. Next, (data collection) gathers relevant data, followed by (data preparation), where the data is cleaned and organized. In (exploratory data analysis (EDA)), patterns and insights are uncovered.
(Modeling) involves building statistical or machine learning models to make predictions. These models are then (evaluated) for accuracy and effectiveness. Once validated, they are (deployed) into decision-making processes. Continuous (monitoring and maintenance) ensure the model's performance remains optimal, with adjustments made as necessary. Documentation and iteration are key throughout the process.
